

## RT500 RUN-TIME MODULE

The RT500 Run-Time Module is a digital device that monitors the time a gas valve, switch or other voltage input is applied, calculates the time and outputs a pulse to interface with most all wireless transmitters and sub-metering equipment. Each pulse is equal to 1 minute of 'on' time and partial minutes are stored in memory until the next voltage('on' time) is initiated. An LED confirms the device has pulsed.

Each RT500 is 100% lab tested for complete accuracy. 5-year warranty.

**Compatible with:** Inovonics  
SpeedRead Technologies  
RadioPath, Inc.  
Etc.

**Input**  
12-24 VAC/DC

To 12-24VAC/DC  
Control Valve or  
monitored device.

**Output**  
Solid State Pulse  
Isolated Pulse @ 60sec

To transmitter, pulse  
counter or sub-  
metering device.

**Dimensions:**

Length 3.0"  
Width 2.0"  
Depth 1.0"  
Wire Length 22"
